

Andrea Ongarato

PhD Student in
Statistical Sciences

at the University of Padova

EDUCATION

BSc in Statistics for the Economy and Business

University of Padova, 2020 - 2023 · Grade: 107/110

MSc in Statistical Sciences

University of Padova, 2023 - 2025 · Grade: 110/110 cum laude

TEACHING EXPERIENCE

Teaching assistant

Statistical Models 2, 2025-2026

Multivariate Data Analysis, 2025-2026

RESEARCH PRESENTATIONS

Posters

"Cumulative Shrinkage Processes for Bayesian Multiresolution Functional Regression",

*SISBAYES 2025, Padova, September 2025. **Honorable Mention:***

"For developing an interesting methodology with promising applications"

ABOUT ME

I am a PhD student at the University of Padova, with a research focus on **Bayesian nonparametrics** and related areas of modern statistics. My work centers on the development of flexible probabilistic models that can adapt their complexity to the data, with the aim of extracting meaningful structure from complex and high-dimensional datasets.

My **research interests** include variable selection, model-based clustering and nonparametric regression, with a strong emphasis on methodological development and the application of advanced statistical models to real-world data.

I have solid computational skills in R and Python, which I use for **statistical modeling, data analysis and simulation algorithms**, especially for posterior inference.

I am highly motivated by **interdisciplinary research environments** and enthusiastic about contributing to team-based projects that address applied research questions through modern statistical and data science approaches.
